

Protection Medias device for Adiabatic Coolers & Condensers

POP SCREEN

*Fully involved in the customer's needs,
Jacir innovates for safe and long lasting
adiabatic TOPAZ and ONYYX ranges.*

Function of Media

The evaporation surface is used for pre-cooling of the air. The humidifying Pad covers the totality of the air inlet surfaces on both sides of the unit.

The design and the choice of materials demonstrated the excellent performance and the long lasting of this media, as well in urban zones as in industrial environment.

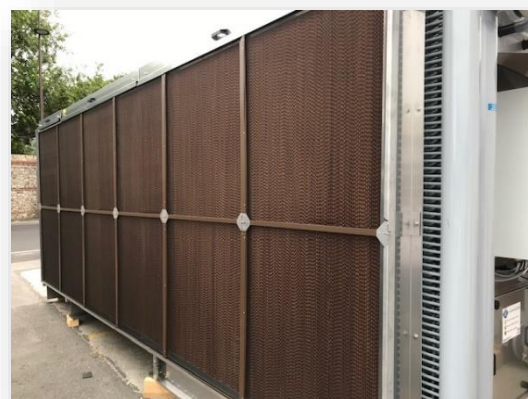

However, according to outdoor environment, air pollution such as poplar fibres, pollens or leaves seasons may be trapped in the Media. JACIR proposes the **POP SCREEN** filter to protect your installation.

Media protection POP SCREEN

Aluminium frame reinforced with stainless steel, to support a thin glass fibre mesh.

Bottom and top supports made of X-STEEL stainless steel.

Easy and fast removal for Medias control.
